Tradition

Chinex® SRT filaments provide exceptional cleaning and abrasion resistance properties. Due to its firm flex, this brush is also great for cutting-in by maintaining control in tight areas. Stiffer filaments provide a firm flex applicator designed to improve performance in today's heavy bodied low-VOC paints.

In-house processing of all synthetic filaments include:

SURFACE CONDITIONING

The surface of our filaments are conditioned using proprietary techniques in order to achieve:

- Easier cleanability
- Increased resistance to curling and flaring
- Increase paint pickup and release ratio

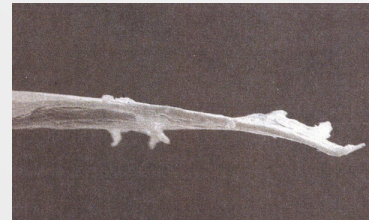

FLAGGING

Tips of the filament are cut in order to create split ends. This gives a paintbrush:

- An increased brush head surface area thus increasing the amount of paint that can be loaded
- A regulated flow of paint preventing dumping or dripping
- Finer tips that leave the paint surface smoother

TIPPING

Ends of the filaments are brought to a fine tip using proprietary technology in order to achieve:

- Increased paint retention
- Extremely fine tips ensuring the smoothest finish

Tradition

Advanced technology in paint production demands a superior and versatile polyester/nylon brush. We have designed the Tradition series of brushes to outperform in varying situations. Tradition synthetic brushes use SRT polyester and nylon filaments and are created to perform with resilience and enduring precision.

Customer Story

"Having sold one brand for many years it is always hard to try something new. I am also a strong believer in not selling something I have not personally tried or believe in. I am always hesitant to sell something new if it hasn't "proven" itself. What pleasantly surprised me about the Nour product line was by the quality of materials used and the fact that Nour personally handles every aspect of the manufacturing; ensuring that their products are made to a standard that both they and the consumer can be proud of."

"The biggest benefit to stocking Nour products would have to be the support staff that stands behind the product. There is always someone at the ready to deal with any question or concern I may have."

Marc Doucette - Inside Sales
Protek Paints

Jasper

Professional painters will appreciate the performance and consumers will find it very attractive because of the price. Entry-level professional polyester/nylon brush where a higher quality applicator is required. The Jasper is a firm flex brush with SRT filaments that can be used for the application of all paints.

Pre-Processed vs. Post-Processed DuPont™ Filaments

Brilliant finish™

There is good reason why this is our most popular paint brush. This entry-level professional paint brush is extremely versatile and performs exceptionally well in any situation. It is priced with the consumer in mind making it an appropriate paint brush for a single-use project where a high-quality applicator is required. Its paint pick-up and release is remarkable and in conjunction with a firm flex, this paint brush is well-suited for today's heavy bodied paints.

Banff

High quality natural black bristle designed for the contractor. Black bristle is double-boiled and hand-crafted to guarantee superior performance while keeping a keen eye on the bottom line. Black bristle is naturally thick which provides a firmer flex and allows for greater paint pick-up and release. Ideal use for oil-based paints, primers and enamels.

Natural Bristle Brushes

Natural bristle brushes should only be used for oil-based paints. They are not recommended for use in water-based paints because they absorb water, causing the bristles to flare and lose their shape.

There are two variations of natural bristle brushes that we offer; black and white bristle. Each bristle type has its advantages and disadvantages. Black bristle has higher abrasion resistance and is firmer, making it ideal for primers, enamels and all oil-based paints. It is considered a great production brush.

White bristle is thinner, softer and has finer tips than black bristle making it ideal for varnishes, polyurethanes and specialty marine coatings. Any painting job that requires a smoother and finer finish would demand a white bristle brush.

WoodCare

Introducing one the of most efficient stain brushes on the market. The performance of these stain brushes far exceeds the expectations of consumers and contractors alike. With such a high-quality applicator comes an exceptionally high quality finish, which is exactly what the WoodCare line of stain brushes is able to achieve.

Professional Specialty Roller Covers

MoBlend

- Super smooth finish
- For latex, oil-based enamels, polyurethanes, varnishes and high gloss paints

HERITAGE *Extreme finish*

Every Heritage roller cover begins with a high-density woven fabric made of a selection of fibres blended together to minimize texture for a guaranteed smooth finish. To eliminate gaps and overlaps, every roller is hand-wound.

High-Density Woven Lint Free Roller Covers

FABRIC TYPE: Woven
PAINT TYPE: For All Paints

| SKU | SIZE (mm) | SIZE (inch) | UPC | MOQ | SP | MP |
|----------|-----------|-------------|--------------|-----|----|-----|
| Z 90HE10 | 229x10 | 9x3/8 | 059186742143 | 10 | 10 | 140 |
| Z 90HE15 | 229x15 | 9x1/2 | 059186742150 | 10 | 10 | 120 |

Nap Size

An important factor to consider when picking out a roller is looking for its associated nap height. Simply put, this means how long the fibres are from the core of the roller cover. The shorter the fibre is, the smoother your finish will be. On the other hand, the longer the fibres are, the more textured your finish will be.

There are disadvantages with a lower nap height such as reduced paint pick-up and release; because there are fewer fibres, less paint will be absorbed. If you are looking for greater production (more paint pick-up and release), a larger nap size is required. In addition, you will choose your nap height based on which surface you are painting, whether it be a smooth or textured surface.

Here are some general recommendations:

Smooth Surface (5mm Nap), Semi-Smooth Surface (10mm & 13mm Nap), Semi-Rough Surface (15mm Nap), Rough Surface (20mm Nap) and Very Rough Surface (25mm & 30mm Nap)

Tradition

There are good reasons why this is our most popular line of roller covers for both the professional painter and everyday consumer. Our Tradition Lint Free refills really excel because we use premium woven fabric made of an assortment of select fibres blended together to maximize paint pick-up and release. Our processing ensures a smooth finish.

Customer Story

"I have sold Nour products ever since I started in the business. Nour has a name/ reputation that people ask for; it's common for customers to come in and ask for specific Nour items like Tradition or AquaGlide brushes. Customers ask for Nour items by name. They've taken the time to use Nour products, and hence taken the time to realize the quality as well as taken the time to remember the Nour name and product name."

"The most consistent stream of feedback from customers about Nour tools is simply that they are quality products at affordable prices. It is fact that the price/quality aspects of Nour products are very good."

Shannon Springer
Color Company

MoBlend

MoBlend roller covers provide a super smooth finish. These refills are most suitable for latex, oil-based enamels, polyurethanes, varnishes and high-gloss paints. This roller is offered in a phenolic core for added solvent resistance.

Simulated Mohair

FABRIC TYPE: Woven
PAINT TYPE: For Latex, Oil-Based Enamels, Polyurethane, Varnish & High-Gloss Paints

| SKU | SIZE (mm) | SIZE (inch) | UPC | MOQ | SP | MP |
|---------|-----------|-------------|--------------|-----|----|-----|
| Z 90M05 | 229x5 | 9x1/4 | 059186731154 | 10 | 10 | 180 |

Manufacturing Process of a Roller

The process of manufacturing roller covers begins with the fabric and the core. The fabric is wound on to the PVC core using an adhesive to keep the fabric properly secured. Once the adhesive is cured, then the roller is precision-cut to the required size. Afterwards, the roller is beveled which helps eliminate streaking or ridges when painting. Lastly, the roller is combed and vacuumed to ensure all loose fibres are removed before being packaged.
